

# Stabilizer

## For Long-Lasting Chlorine

**CAUTION: KEEP OUT OF REACH OF CHILDREN**  
See additional cautions on back panel.

Protects chlorine from the sun's  
damaging effects

Increases chlorine's effectiveness

Cuts chlorine consumption  
by up to 25%

Great for spring start-up!

Stabilizer pre-conditions your pool water to make chlorine last longer.

**DIRECTIONS:** Treat pool water at the beginning of each pool season with Blue Wave STABILIZER. Add 1-2/3 lbs. (approx. 3-1/3 cups) of STABILIZER for each 10,000 gallons of water using the following method:

- 1) Backwash the filter before adding STABILIZER. Precoat filter element if necessary.
- 2) To add STABILIZER, make a slurry of powder in a pail of water and, with the pump running, pour the slurry into the skimmer.
- 3) Do not backwash filter for at least 24 hours unless the pressure indicates the need to backwash. This treatment is sufficient to produce recommended cyanurate concentration of 20 ppm in the pool water.

Use Blue Wave® SANITIZING GRANULES, 3" SANITIZING TABLETS, 1" SANITIZING TABLETS, or SANITIZING STICKS (cyanurate chlorine compounds) throughout the season to maintain the chlorine level in your pool. These Blue Wave® chlorine products are stabilized which will help maintain the cyanurate level in your pool for long-lasting chlorine effectiveness. Cyanurate is lost only by draining or splashing out of the pool. Re-treatment with STABILIZER is recommended if a sufficient amount of pool water is replaced during the swimming season.

**CAUTION: KEEP OUT OF REACH OF CHILDREN**

Powder may be harmful if swallowed. Avoid inhalation of dust. Avoid contact with eyes. In case of contact with eyes, flush with plenty of water for 15 minutes and get medical attention.
